

Warburton Highway landslip repairs

The Department of Transport and Planning is working to minimise the disruption to the community as we plan to repair the landslip.

In February we closed Warburton Highway for one night to undertake underground investigations on both sides of the road to determine the depth we need to excavate, and impact to both sides of the road.

Based on these investigations, we're now finalising plans to safely repair the landslip and how long we need to fully close Warburton Highway.

What we're doing

- investigating potential detour routes for all vehicles travelling in and out of Warburton
- planning for improvements on Old Warburton Road to cater to additional vehicles
- engaging with council, emergency services and public transport operators to understand access and local needs.

Considerations for detours

- the design required to safely deliver long-lasting repairs to the highway and prevent future landslips
- maintaining the safety of all road users, contractors and traffic management controllers
- access for the local community and people travelling to Warburton
- community safety in the event of an emergency
- understanding access requirements for emergency service vehicles, public transport buses, school buses and oversize vehicles including freight.

Once the works scope and suitable detours are determined, we will update the community with the plans to repair the road before works start.
